

MORE THAN AN ERP

*Native Integrated
Digital Platform for
Holistic & Agile Management*

*The complete Holistic and Agile Management solution for your business: today and tomorrow.
Transform Your Business with Agility, Control, and Continuous Availability.*

Competitive Advantages

**EMSYS: The Digital
Foundation of Your
Success**

More than an ERP: A complete platform for digital management

Single, natively integrated solution: gives you back control, time and peace of mind. Informed decisions, proactive action

Unmatched agility: rapid adaptation to change, with transactions reflected instantly

Top-tier reliability: EMSYS ensures business continuity through Zero Downtime updates and persistent configurations in future versions.

No-Code agility and autonomy: eliminates programming and rigid structures (no IDs, code structures or multiple fields).

Expertise since 1990 - a PRODINF Software product

**Versatile solution for
all industries**

Multinationals and holdings: consolidated view and centralized control of geographically dispersed operations.

Large, medium and small organizations: from companies with thousands of employees to growing businesses, EMSYS scales to your needs.

Public and private sector: adaptable functionality meets the specific requirements of both sectors.

Industry solutions: extensive experience and successful projects in Construction, Utilities, Discrete Manufacturing, Process Manufacturing, Distribution, Retail, Services, Public Sector, Universities, Food Production, Transport, Insurance, Research, IT...

**Intelligent business
modeling**

EMSYS decouples operational flows from management flows through cost objects that natively integrate the value hierarchy and business dimensions. Management accounting runs automatically, precisely classifying costs (direct, indirect and sub-activity costs). The system enables advanced what-if simulations and flexible settlement scenarios, turning raw data into strategic decision support based on performance analysis.

 Configurable major objectives	Performance of any management and analysis structure: total control and detailed visibility over business performance. Management by indicators, objectives and exceptions Financial-flow-based management: Cash Flow - tool for monitoring delayed, current and future financial flows Reduced support and management costs (40%) Budgeting and control of operational processes
 Single, natively integrated platform	Forget data silos and multiple disparate systems. EMSYS natively integrates all critical capabilities you need: ERP, CRM, BI, BPM, Document Management (DM), Asset Management, Project Management, HR, E-learning, Digital Signature, Smart Emails, Registry and many others.
 Process automation: ERP and Non-ERP	EMSYS is not limited to traditional ERP processes. It automates a wide range of workflows, from finance and HR to non-ERP-specific processes, ensuring comprehensive digitalization and maximum operational efficiency.
 Chatbot and AI Assistant	The platform provides dual AI support: the Chatbot queries verified documents to provide fast guidance, while the AI Assistant analyzes the database and functions used directly. They drastically reduce operating costs by eliminating expensive external support and instantly generating strategic insights.
 Compatible Databases	EMSYS is compatible with leading databases such as Oracle, MS SQL Server and PostgreSQL, offering flexibility and seamless integration with existing IT infrastructure.
 Integrated Security and Unified Authentication	It integrates natively with a wide range of essential applications (LDAP, Active Directory, Facebook, Google, Github, etc.) and can connect to legal systems, ensuring a coherent, compliant software ecosystem.
 Integrated Open Source Products	Using open source products helps reduce total cost of ownership (TCO) without compromising performance or security. They are alternatives to commercial products that can be used within the platform.
 Deployment and Acquisition Flexibility	Choose the model that fits you: On-Premise (own servers) or Cloud Agnostic (any cloud provider). We offer full freedom in acquisition as well, either as a service (SaaS) for lower upfront costs or as a license, ensuring full adaptability to your infrastructure and financial strategy.
